

W-300 WB UV

UVEDITION

Get ready to enjoy the Anest Iwata experience with **UV paints!**

Anest Iwata has decided to dedicate for the specific application of UV cured paints, a special version of its renowned W-300 WB model.

PRIMER PROMOTION

The **W-300 WB UV** is the latest addition to our W-300 series. As the W-300 series is already known for its superior atomization, we have added some very specific features to our 1.2 nozzle size to make it a dedicated specialist for UV paint application.

It comes with a **black colored** 200 ml **cup** that prevents UV ray exposition of the paint and for extra convenience we have added an **Air Cap Cover** to protect the area around the nozzle. This prevents remaining paint on the nozzle or air cap from curing while the spray gun is not in use, making its usage and cleaning as effortless as possible.

Although the black cup characterizes the visual appearance of the spray gun already we have added several other black details and an additional engraving to make recognizing it even easier.

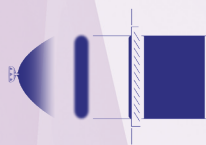

FEATURES

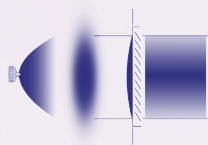

- Specific for UV cured paints
- Black UV Paint Cup: 200 ml
- Black Air Cap Cover to prevent paint from drying

SPLIT NOZZLE™ TECHNOLOGY

- A very fine atomization even at a low air inlet pressure
- Higher transfer efficiency
- Lower air consumption & less overspray
- The spray pattern is large, uniform, flat, soft
