

## Assorted Deutsch DT Connector Kit 22pc

Heavy duty connectors which protect against the weather, dirt & high temperatures.

Connectors have a locking mechanism to prevent the wires and terminals vibrating free. Once cable has been crimped onto the terminal, push the terminal through the back of the connector until you hear a 'click'. Turn the connector around and insert the wedge lock plate until you hear the 'click' again which will give a secondary securing lock for the terminals. The pin terminals are inserted into the connector receptacles & the socket pin terminals are used on the connector plugs. For a professional crimp please use our Laser Part No 7533.

Industry standard size 16.

Ideal assortment for any automotive electrical engineer working on sensor or harness repairs.
